# DUAL ROLLER BLINDS

Johnson beautiful Dual Roller Blinds make a sense where beauty and privacy both are required. These blinds are by far a great choice to give your home décor a completely new and fresh look.

Dual roller shades blend sleek design with quality and functionality to ensure that your living space is always comfortable and attractive. These Blinds have two fabrics fitted beautifully in a single headrail. Front sheer fabric filters the light beautifully and the use of special yarns in subtle color tones provides a luxurious atmosphere for the interior. For the back fabric there is choice to select the fabric from Blackout series or Dimout / translucent series.

Blackout Fabric at back takes control over bright Sunlight and heat. These Blackout fabrics are more energy efficient because of their higher insulation properties thereby making air conditioning more effective. Privacy is another reason for choosing blackout shades since they prevent anything being viewed in your space from outside.

Dimout / Translucent Fabrics also termed as light filtering fabrics give you the best of both worlds letting you maintain your privacy, while still allowing light into your room. Our translucent blinds reduce glare, let in light but do not allow anyone to see in from the outside.

These blinds work by manually rolling the fabric around a tube, with an operating chain. This makes the ease of use very much pronounced. If you want it to be even easier, you can choose the motorised option. The motor inside the roller tube is operated easily via remote control.

At Johnson, we only use the finest quality fabrics and highest grade components, so you don't have to worry about our workmanship and quality.
